

Medusa - OSINT Platform

[Originalartikel](#)

[Backup](#)

<html> <p>The web, a never-ending flow of information and data, is currently the place where criminal activities thrive. This is the arena in which Law Enforcement Agencies operate to identify and fight criminal organizations. Illegal activities are planned, organized, and carried out on all the available channels on the Web, including Social Networks, Dark Web, and Forums. Most of the time, precious data are publicly available, although hard to detect and analyze. MEDUSA^{® } is the must-have platform to understand those phenomena and to harvest useful information for the analysis. This is the only way to deal with the web vastness and pinpoint the target. Traditional investigative tools, like data gathering through Lawful Interception, are often not enough. The terrorism challenges and the cyber threats are imposing a greater attention on Social Media, Web, Dark Web and Forums where a criminal can easily hide their malicious activities behind fake identities. MEDUSA^{®}, through its Avatar Management Module, enables intelligence department to perform under cover operations to engage and discover more information about most complicated targets.</p> </html>
